WEBSITE bryliejw.github.io

I’m in my element at the start of a project, working out what the problem actually is.

I research the whole system around a brief, including the people, culture, platforms, social context and politics involved, then translate it into a strategy and something people can see and use. That might be editorial, a campaign, an installation or a digital experience, whichever medium suits the concept best.

I’m drawn to small, values-aligned teams, non-profits, community organisations and civic tech, and to research-led roles where I can keep asking who, what, where, why, and who’s missing.

Having too many tabs open is my specialty

Neutral is a position that declines to be named.

CYPHER

Magazine & typographic style guide

- Cultural resistance
- Urban standardisation

2024 · Individual · UTS

A uni assignment for Typography in Context: a magazine for visual communication designers, with masthead, covers and a style guide.

While organising my photographs into sections, I realised there was a cohesive colour scheme that heavily contrasted against the mundane urban landscape surrounding it.

I colour-graded my photos and masked the backgrounds to enhance this contrast. One spot colour per spread gives the range of street art without clashing, on a grid deliberately broken in key moments, where imposed order coexists with graffiti.

Tags are acts of resistance to the increasing standardisation of urban environments.

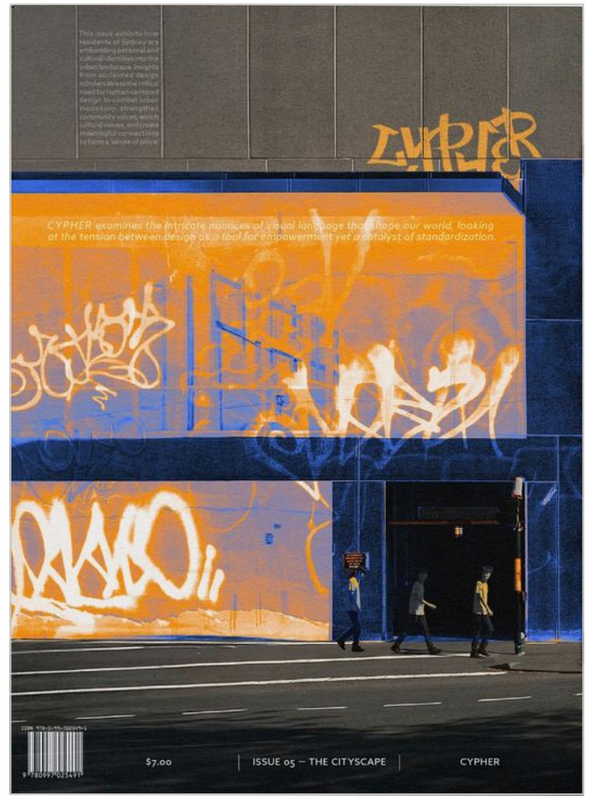

Editorial design
Image manipulation

Typography
Art direction

INDESIGN / PHOTOSHOP / PROCREATE / PHOTODOCUMENTATION

Issue 5 cover artwork, which flows across the front and back cover. Made from my photographs and extended with Photoshop Generative Fill (Adobe Firefly). Graffiti belongs to its writers.

ISSUE 5 · BACK COVER

The back cover continues the street scene from the front, with the masthead tag repeated in the orange spot colour above the issue blurb.

The masthead is a chisel-marker tag that changes every issue. For Issue 5 the E becomes an epsilon, the Greek numeral five.

01 Rigid columns of body text mirror urban infrastructure while spray-painted headlines break free.

02 Headings drawn as tags, with justified body text wrapped around them.

EGD The Importance of Environmental Graphic Design in Urban Spaces Roula Ganoti & Iro Laskari

TEXT Text Ellen Lupton

MASTHEAD

Employing a dynamic approach to its visual identity, every issue of CYPHER features a distinct masthead style that communicates its subject matter.

The foundational letterforms intentionally break away from the homogeneity of conventional publishing design choices, ensuring each issue has its own unique style while cultivating a cohesive brand identity that reflects the continuously changing roles of visual language and expression in the modern world.

SPECIFICATIONS

When modifying the masthead design for each issue, it's essential to preserve key components to establish a consistent visual identity. These include:

- A bold, powerful impression achieved through heavy weight and tight kerning.
- A combination of uppercase + lowercase letters modified to maintain proportional unity and a relatively rectangular overall form.
- Organic, hand-lettered qualities, such as a slight change in contrast and stroke weight, or natural terminals.
- Dynamism developed by applying creative ligatures and/or stylistic adjustments that provide visual interest.

Each masthead variation should also aim to incorporate typographic or symbolic motifs that either relate to the issue or entice the intended readers. Drawing from historical and contemporary type design, these modifications create meaningful connections between changing visual languages, symbolism, and each issue's theme.

These guidelines ensure that each masthead variation, while unique, remains unmistakably CYPHER.

ADAPTATIONS

The masthead lettering draws inspiration from a "hand-style" tag created with a thick chisel marker. The defining characteristics of this style include balancing sharp angles with fluid curves and finding creative and expressive approaches to intertwine letters, resulting in an irregular composition that captures the raw, spontaneous essence of tagging culture. These details transform the tag from mere letters into a unified, visually dynamic expression of identity.

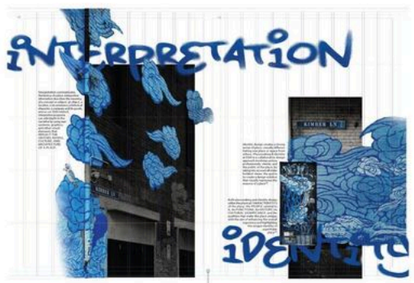

SYMBOLISM

In the masthead variation for Issue 5, the letter 'E' emulates the form of an epsilon (ε), a character adopted from the Phoenician letter 'He' when Greeks first developed alphabetic writing. Beyond its historical significance, epsilon represents both the number five in the Greek numeral system and forms the basis for the Latin letter E, reflecting the "open e" sound heard in the word "cypher."

1.1

GRID AND LAYOUT

The layout integrates horizontal flowlines with a 12-column grid, creating compositions that are both flexible and cohesive. These flowlines serve as alignment points across spreads, where content can hang from, align with, or be sized proportionally between them. Elements may span multiple columns for emphasis or use narrower measures for detailed text, with the freedom to break from the grid when conceptually appropriate.

Pages 18-19 demonstrate this versatility: The vertical rhythm of text columns and cropped architectural photos take on a pictorial quality, suggesting rising buildings in a cityscape. This rigid framework is then deliberately disrupted by the street art expanding past their backgrounds, flowing across columns, breaking margins, and influencing the justified text blocks to warp around them. This dynamic interplay visually represents the tension between institutional order and artistic intervention in urban spaces.

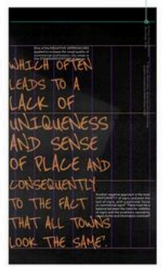

3.2

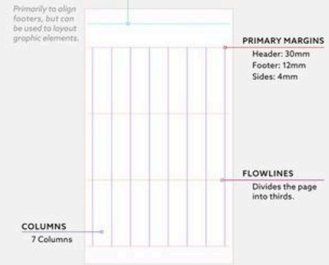

INSERT PAGE

PAGE DIMENSIONS

120mm x 210mm
3mm Bleed

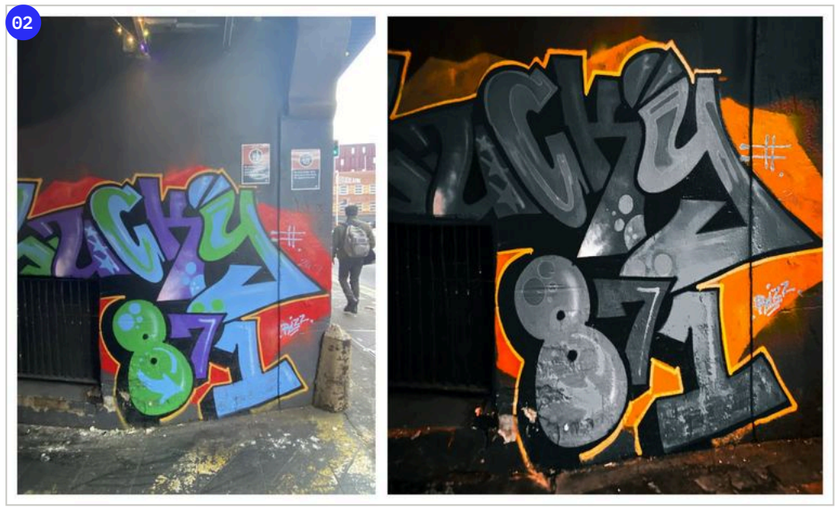

These pages act as secondary content areas, distinct but cohesive within the overall publication. Use in instances where corresponding material or visual interest can be provided without disrupting the flow of the publication. They should serve as a creative way to break up the text-heavy sections and engage the reader in a more interactive experience.

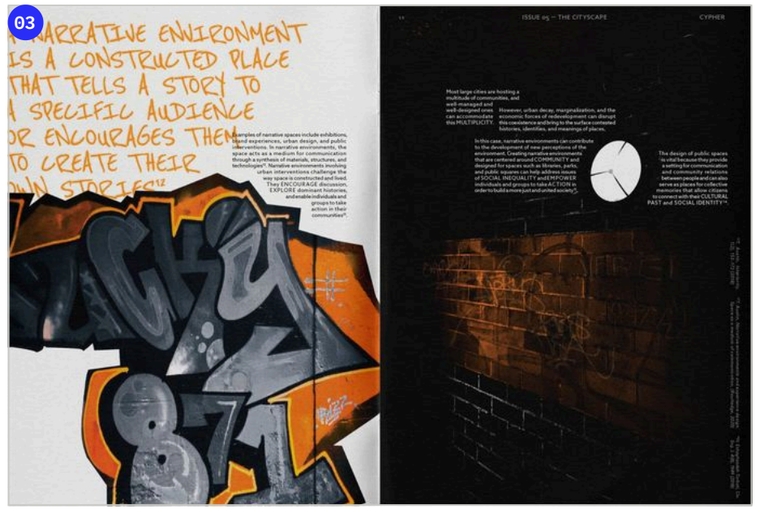

4.1

01 STYLE GUIDE · 1.1 MASTHEAD · 3.2 LAYOUT · 4.1 BODY TEXT

I wrote a style guide that sets the rules for the masthead, type, grid and body text, so each issue can change its masthead and still read as CYPHER. Issue 5 is the reference for every rule.

02 Colour-graded and masked the backgrounds to enhance the contrast against the mundane urban landscape PHOTOSHOP

16 Days of Real Talk

Conversation cards & a campus campaign

- Gender-based violence prevention
- Primary prevention

A live client project for Socially Responsive Design at UTS. The Women's and Girls' Emergency Centre (WAGEC) asked our studio to launch its We Need To Talk cards to university students during the 16 Days of Activism against gender-based violence.

Almost half the students we surveyed had seen or experienced sexism at uni in the past year.

We redesigned the deck as 30 pocket-sized cards, colour-coded by topic so students choose how deep to go. We used speech bubbles as the main device to show that not every opinion has to be fully formed to be part of the conversation.

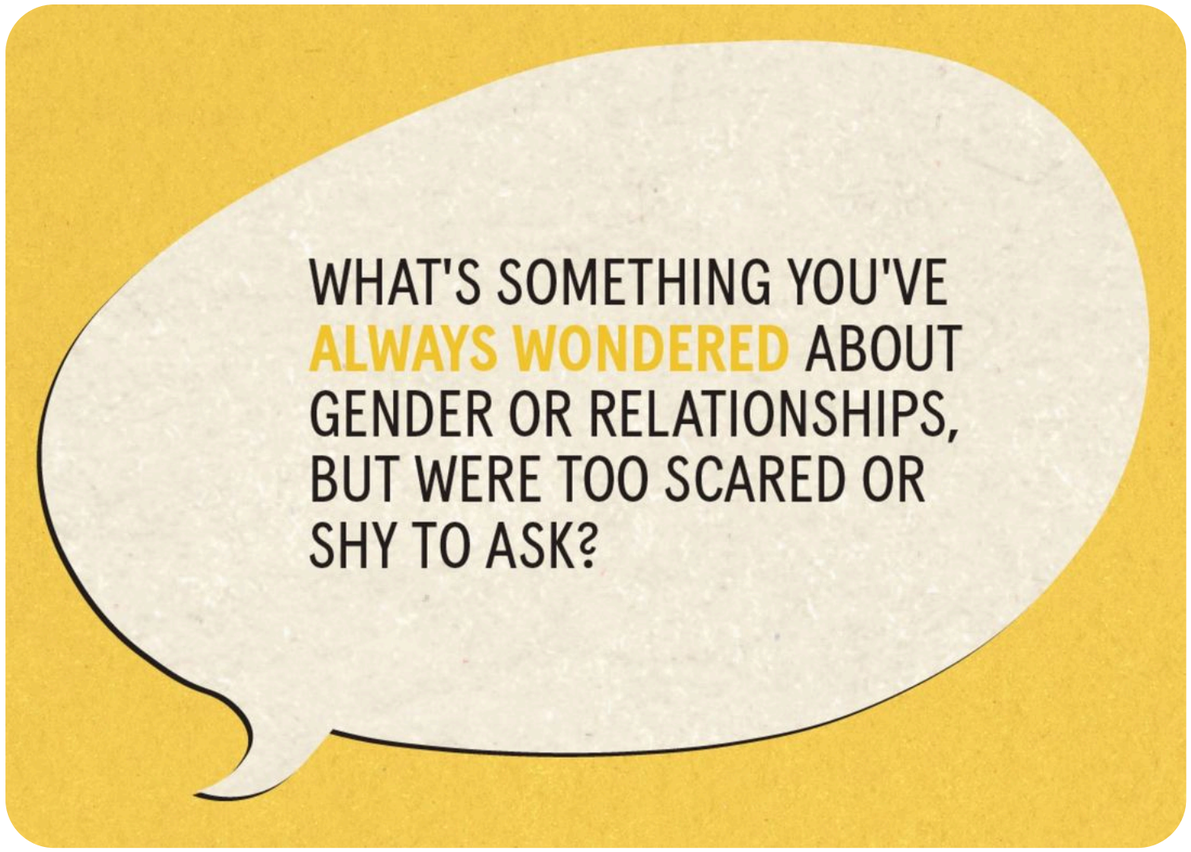

I worked on research and positioning, project management and the kickoff workshop, and designed and built the landing page in Webflow.

Workshop facilitation
Typography
Web design & build

FIGMA / MIRO / WEBFLOW / SURVEYS

Printed cards. Card questions are by WAGEC. I set the card typography, shared the layout with Rachel, made the majority of the speech-bubble shapes and did the colours, textures and shadows. Teammates made the final artwork.

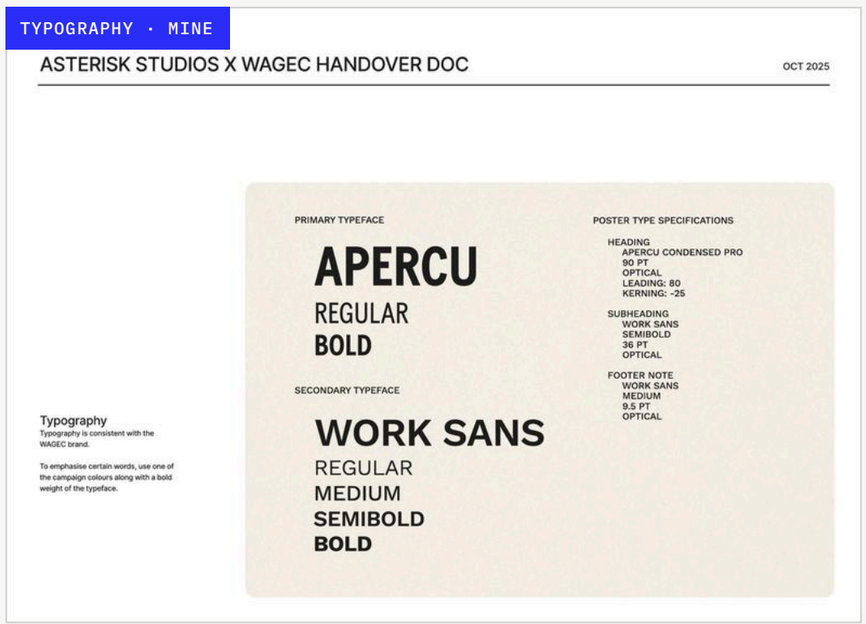

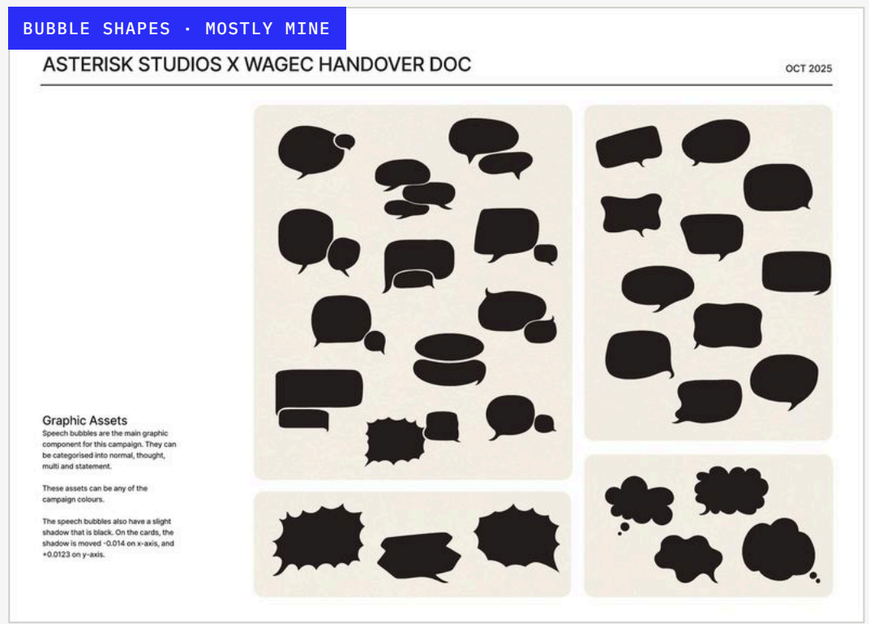

TYPOGRAPHY · MINE

BUBBLE SHAPES · MOSTLY MINE

OBSERVED · DECK TEST · W3

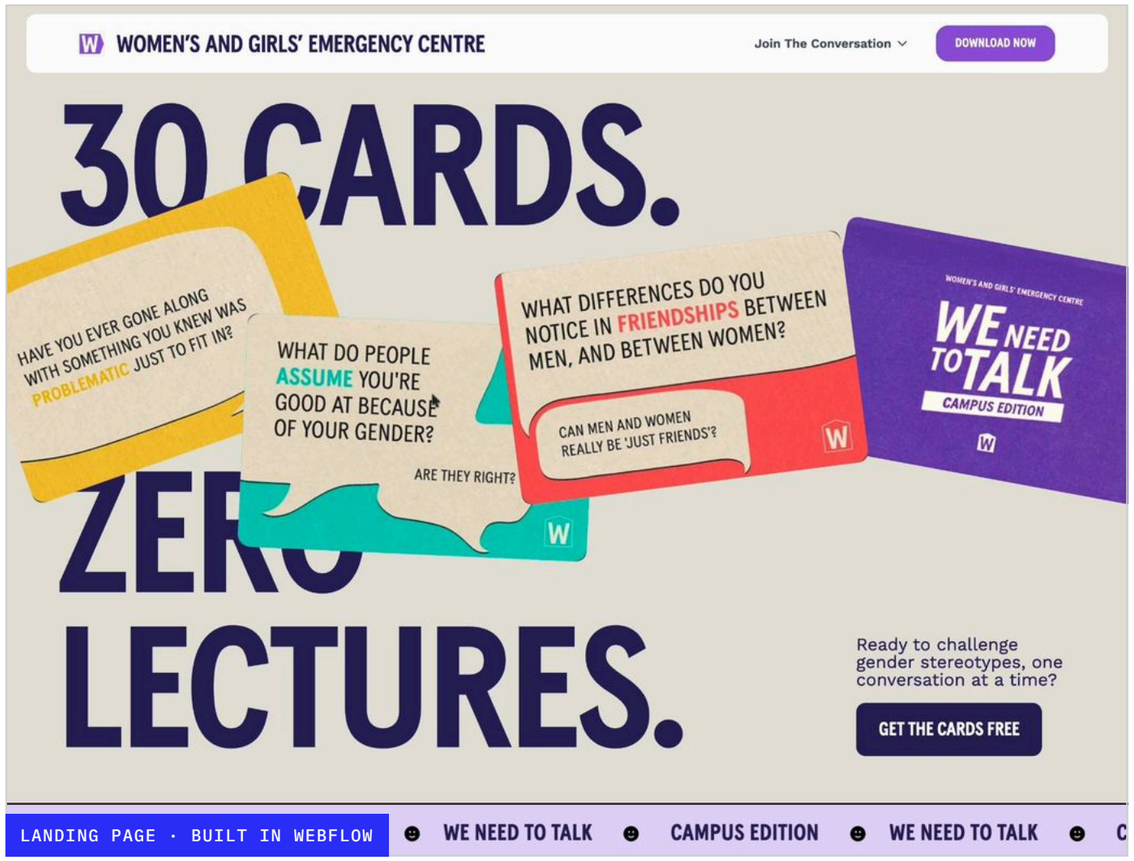

The original cards felt meaningful but too formal, large and academic, especially in a second language.

DECIDED

We made the cards smaller and type-led, with clarity and readability as the priority.

I set the card typography in Apercu Condensed and Work Sans, balancing clarity with warmth. I made the majority of the speech-bubble shapes and did the colours, textures and shadows. Teammates made the final artwork.

Symbiosis

Immersive installation concept for the Powerhouse Museum

2024 · Individual
87009 Visualising Experience, UTS

Brief A university assignment for Visualising Experience at UTS, working with the Powerhouse Museum collection: design an interactive digital experience for one object. I chose Christopher Dresser's cast-iron Garden Chair, 1870.

Insight We see the chair as either a utilitarian object or a piece of art. Reading Dresser's own books, I found that division reflects design for standardisation rather than an intrinsic truth, and that his ornament is built on botany and geometry.

Response Symbiosis is an immersive installation inspired by Dresser's philosophy that true appreciation of beauty arises from contextual knowledge and understanding.

It uses the Garden Chair to critique the arbitrary homogenisation of everyday objects. Visitors enter through mesh pathways with projections on the walls and floor, and symbols around the chair light up the principles hidden in its design.

FINAL VISUAL NARRATIVE · RENDERS & MODELS MY OWN

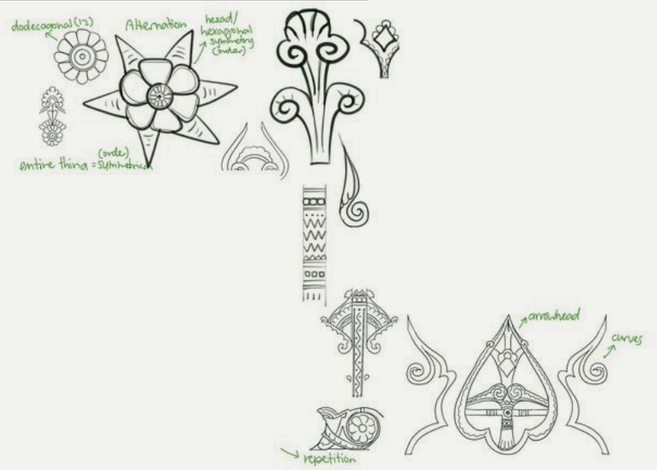

CONCEPT GOALS & REFINEMENT

CHAIR TRACED IN PROCREATE

MOTIF REDRAWS LABELLED BY PRINCIPLE

01 CONCEPT DEVELOPMENT · RESEARCH

I read two of Dresser's books entirely through and traced the chair in Procreate. My first mind map needed constant reorganising, so I pulled out the figures he references in each chapter and made an annotated mind map of these instead, which allowed me to visually see the connections between ideas and concepts.

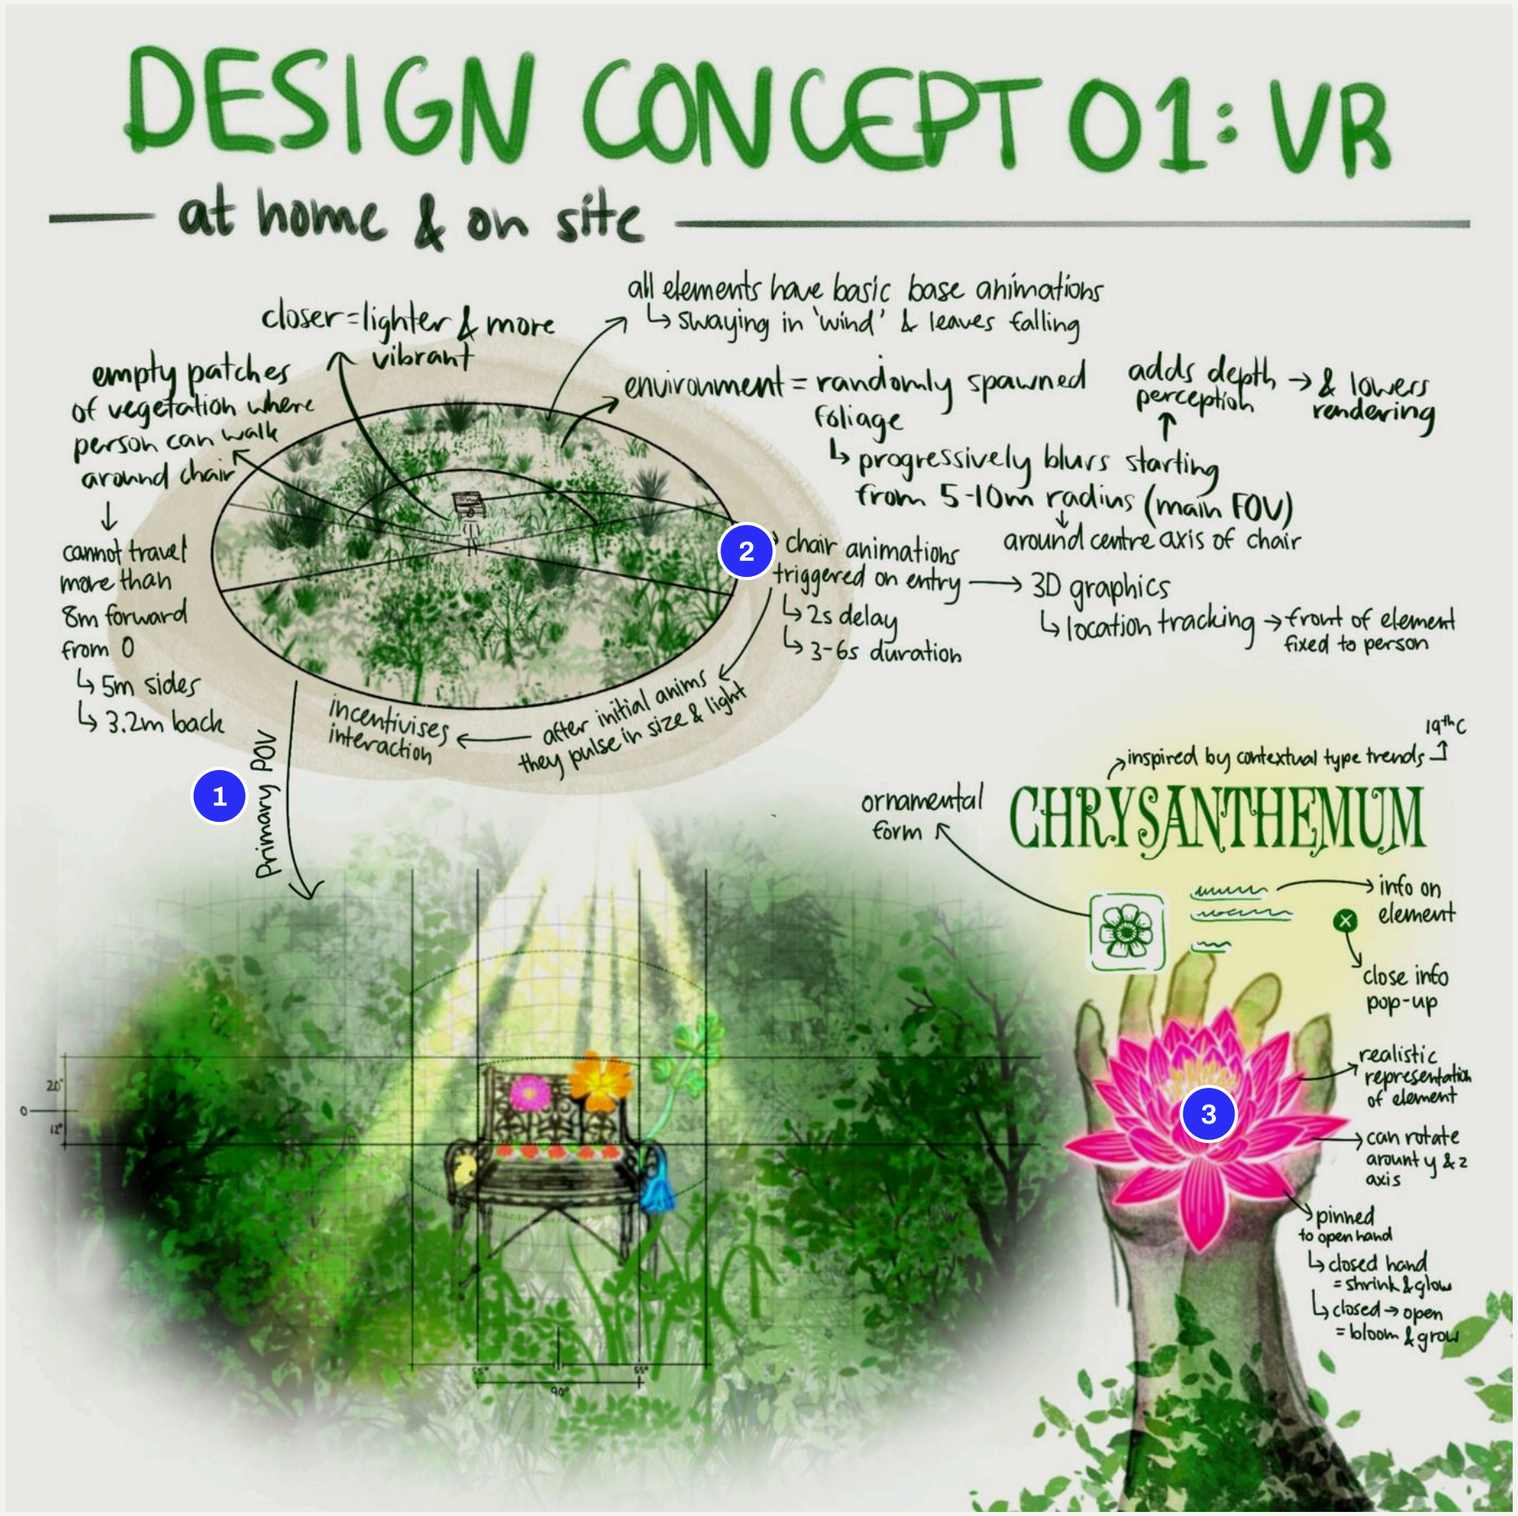

DECIDED

I decided to use modern technologies to reimagine Dresser's ornamental imagery and engage a contemporary audience with the relationship between science, nature and the arts, creating an ethereal atmosphere without overpowering the concept itself.

CHRISTOPHER DRESSER

"We have here not only a manifestation of the truth that a principle of order prevails in the development of plants, but also a revelation of the fact that plants are founded upon a geometric basis."

Set in my final render around the chair.

02 CONCEPT 01 · VR USER JOURNEY

My initial design was a VR experience where the user could 'pick up' a floral motif from the chair and examine it closer.

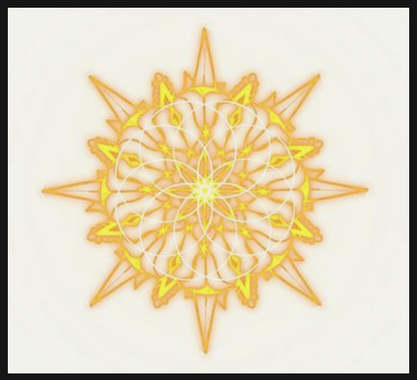

1. Primary point of view: the user walks into a clearing of foliage around the chair.
2. Chair animations are triggered on entry, with a 2 second delay.
3. The flower is pinned to the open hand, so it blooms and grows as the hand opens.

CREATIVE CODE · WEEKS 5–6

I coded this gesture in p5.js with ml5 hand tracking and my own Teachable Machine classifier.

P5.JS SKETCH

OPEN HAND · FULL BLOOM

DECIDED

The classifier needed still images while the animation ran on live video, so I used ml5 hand tracking alone.

WHAT IT TAUGHT ME

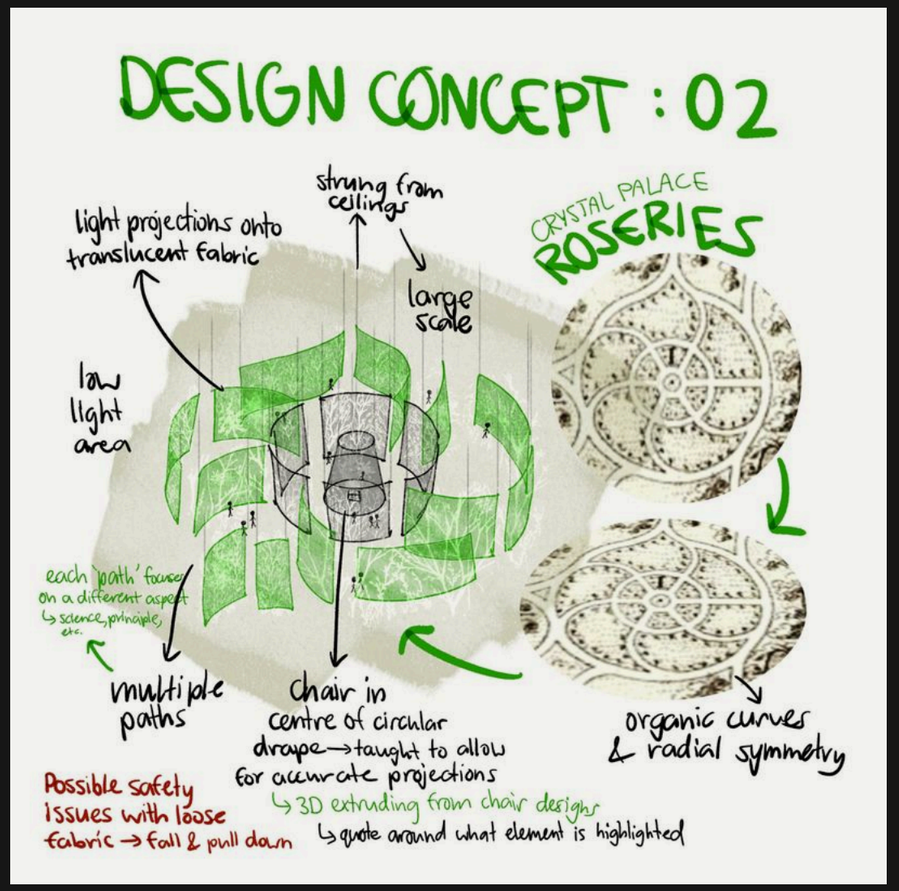

Removing unnecessary complexity can lead to better performance.

PROTOTYPE 1 · GUTTER GUARD & BLUE-TACK FIGURE

03 CONCEPT 02 · REFINEMENT

A headset keeps the experience to one person, and studio feedback was to focus on the experience, not the technology.

DESIGN CONCEPT 02

I moved to projection mapping inside sheer walls, with light projected onto fabric so groups explore together.

PROTOTYPE 1 · MATERIALS

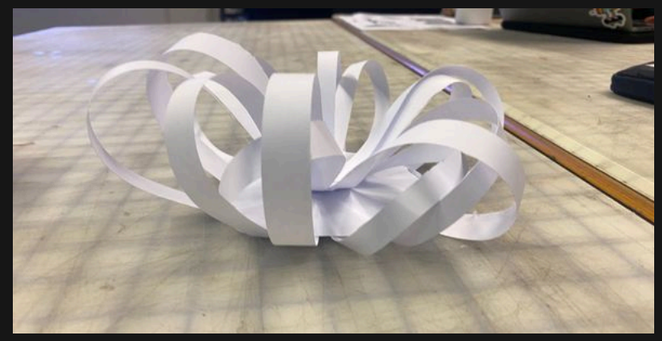

After a wide range of material experimentation, I selected the gutter guard for its structural integrity but adapted my approach due to sharp edges.

ALSO TESTED FOR PROTOTYPE 1

FABRIC DROPPED

Fabric needed too much support, so I built the maze from gutter guard.

PAPER DROPPED

Paper lacked structure, so I built the maze from gutter guard.

04 TESTING · PROTOTYPES 1–3

Did the structure guide visitors through at least 2 pathways, in and out?

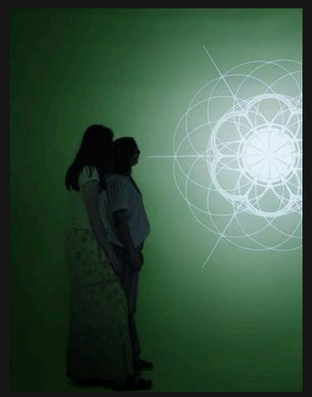

PROTOTYPE 1 · SPATIAL EXPLORATION & NAVIGATION

A small-scale model to test how intuitive it is to navigate the pathways. I observed users without interference and recorded the paths they took to the centre.

PROTOTYPE 2 · INTERACTIVE LEARNING & CONCEPTUAL ENGAGEMENT

Tested whether the symbol interaction is intuitive and whether visitors can derive meaning independently. One user attempted to sit on the symbol, and two reached to touch it.

PROTOTYPE 3 · IMMERSIVE SENSORY EXPERIENCE

Assessed immersion through passive interaction with movement-tracked evolving projections and natural ambient sounds.

DECIDED · PROTOTYPE 2

Orientation was the primary requirement, with no ‘correct’ interaction.

WHAT IT TAUGHT ME

Prototype 2 taught me the necessity of clear interaction cues, and revealed how users interpret design elements in unexpected ways.

02 FLOOR CIRCLES

All users placed their figure on the circles on the floor when they reached the centre, without any instruction.

01 CURVES

Users paused or slowed down at smaller angled curves while moving faster through straighter sections.

DECIDED

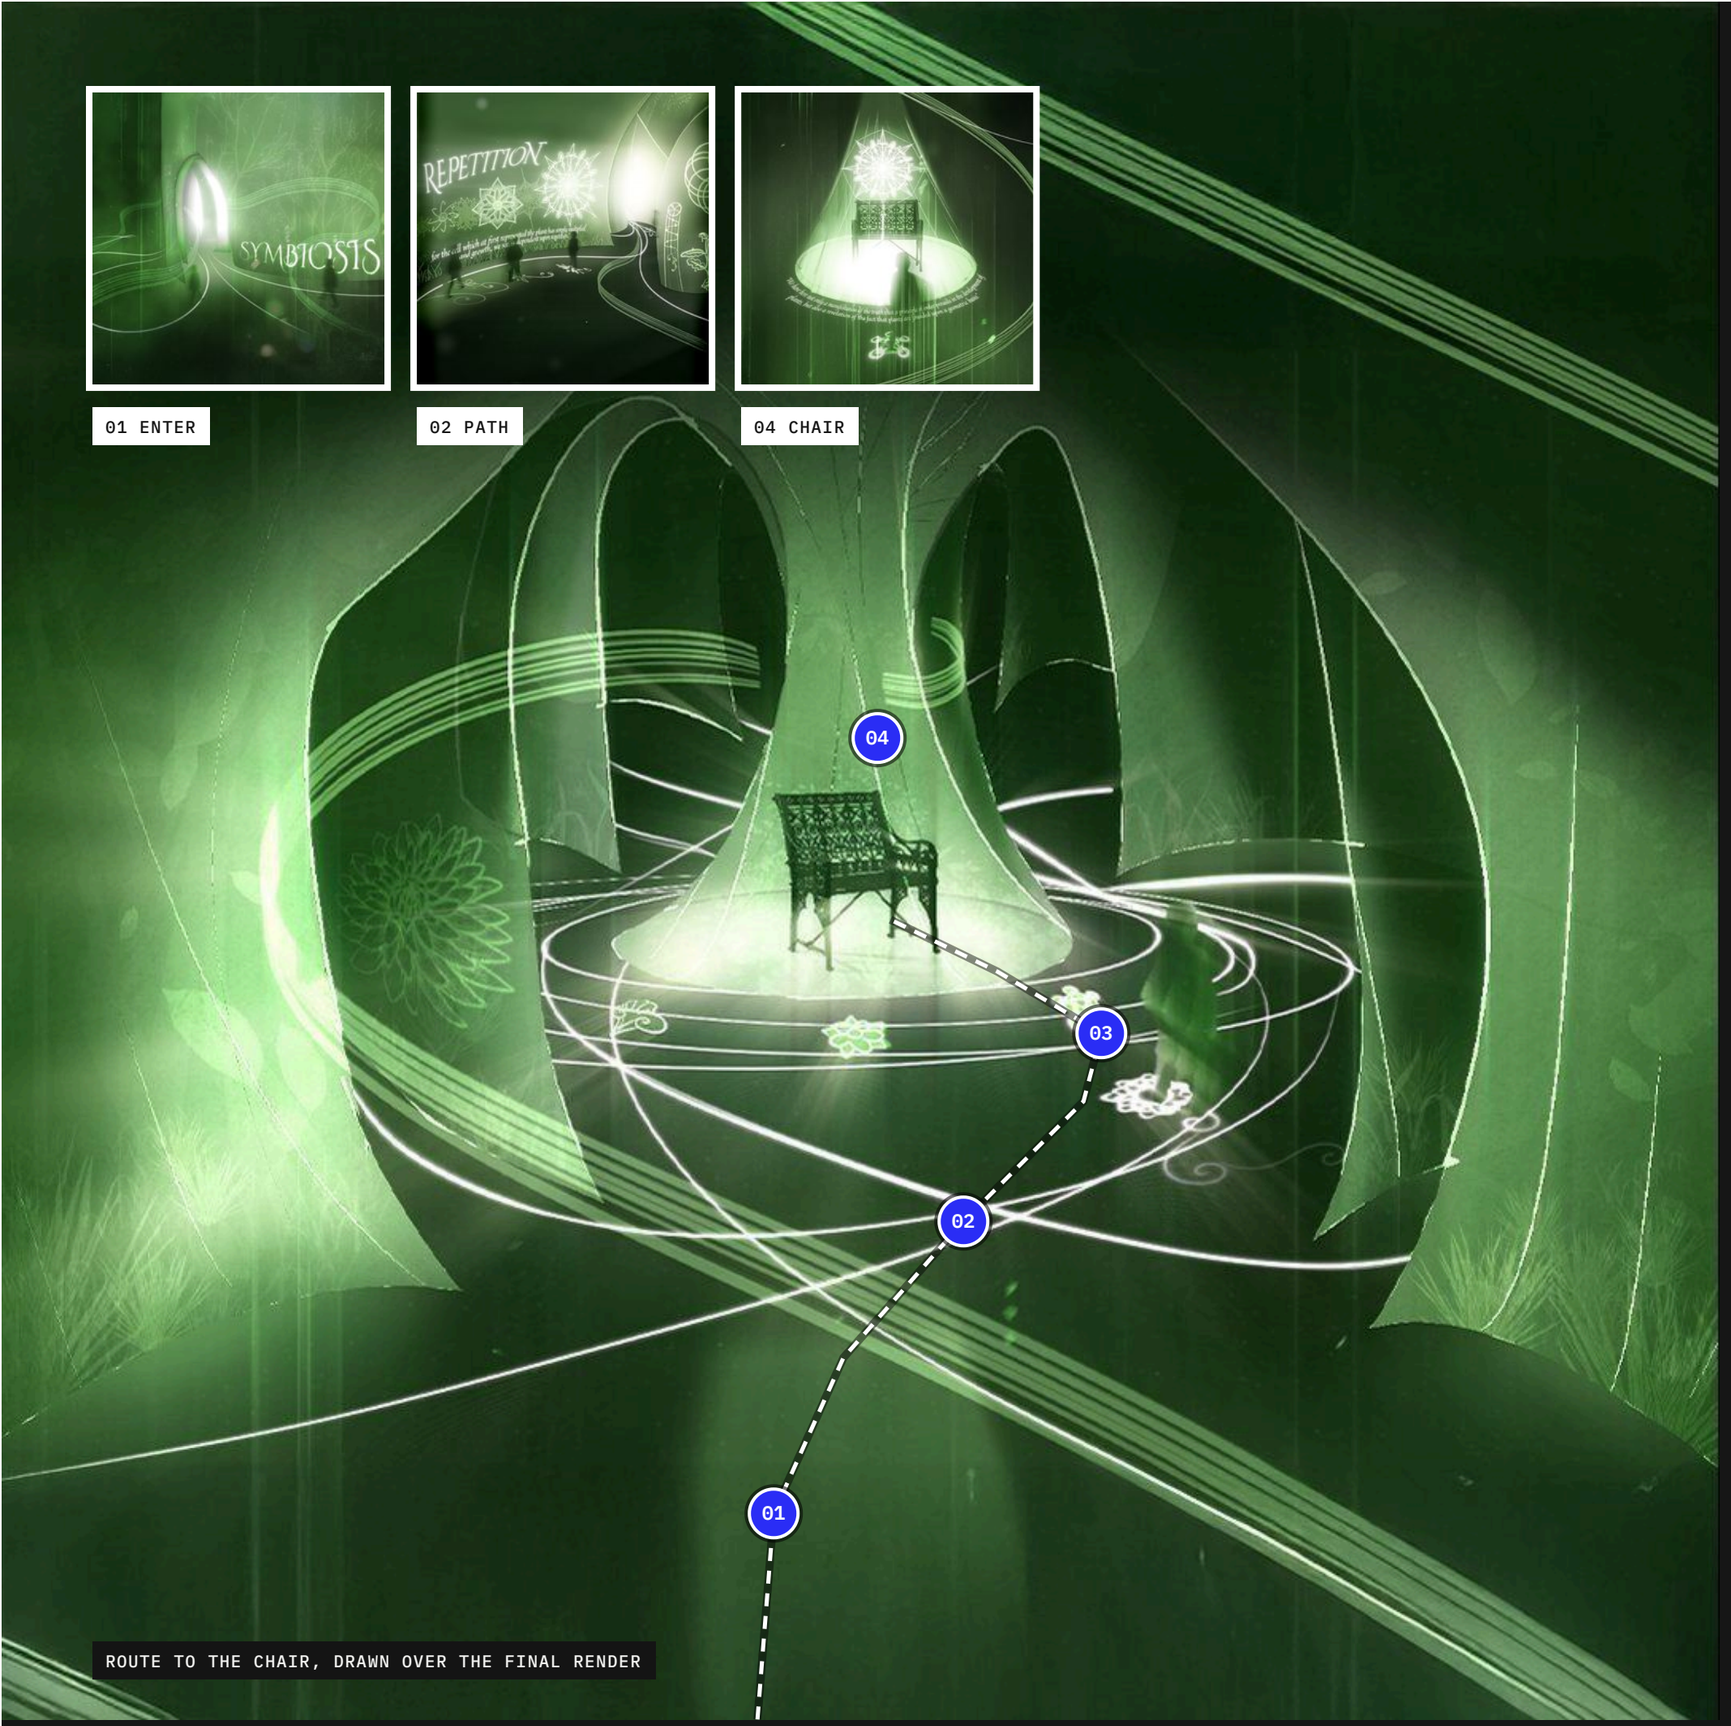

Add points of interest at the curves to leverage natural user behaviour.

LINES OF PASSAGE · USER 1, DRAWN IN GREEN

01 ENTER

02 PATH

04 CHAIR

ROUTE TO THE CHAIR, DRAWN OVER THE FINAL RENDER

05 FINAL EXPERIENCE · WALKTHROUGH

I simulated tracking in testing by manually adjusting the projector, so the final concept uses automated motion tracking.

01 ENTER

Visitors can enter the installation from multiple pathways, with light projections on the walls and floor.

FROM PROTOTYPE 1

Diverse pathways stimulated curiosity and exploration.

02 PATH

The illustrations evolve as viewers move through, and a botanical form generates under each footstep.

FROM PROTOTYPES 1 + 3

More curved routes at the entry points, so visitors understand their role sooner.

03 CENTRE

The size and illumination of the projections intensify upon approaching the chair.

FROM PROTOTYPE 1

The circles on the floor acted as an intuitive visual indicator for interaction.

04 CHAIR

Interactive symbols that encircle the seat illuminate a specific aspect of the design.

FROM PROTOTYPE 2 + CREATIVE CODE

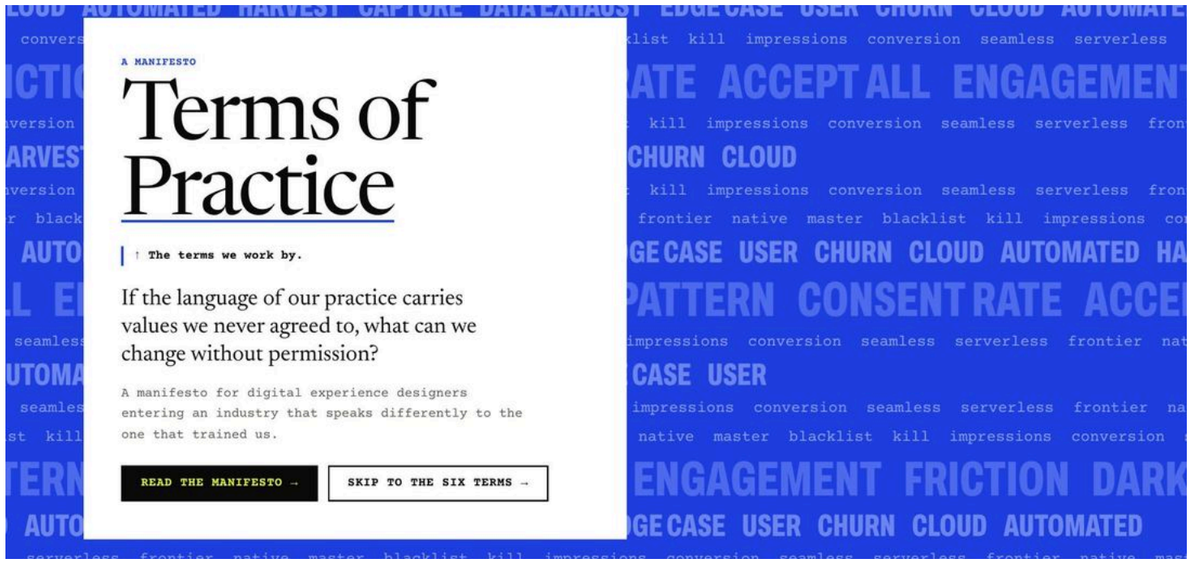

Idle, floor symbols pulse or glow. Active, a line connects the symbol to the projection.

WHAT VISITORS TOOK AWAY · PROTOTYPE 3

Even without displaying the chair itself, the projections successfully conveyed the intended concepts.

When asked what the projection was displaying, there was a unanimous understanding that by the end of the path, the visuals were communicating the geometric complexities behind the final shape.
